Education

09/2026 - Present
09/2022 - 06/2026
09/2019 - 07/2022

ETH Zürich - MSc Computer Science
ETH Zürich - BSc Computer Science
**Gewerbliche Schule Backnang -
Technisches Gymnasium, Computer Science Track**

- Abitur: 1.4 (German grading scale, 1.0 best)

Experience

04/2026 - 09/2026

12/2023 - Present

09/2025 - 04/2026

Software Development Intern - Esri R&D Center Zurich
Full-time · Zurich, Switzerland · Hybrid
Developed and optimized a feasibility prototype within the graphics engine team, independently coordinating with multiple internal teams and stakeholders.

Software Engineer - Arbogast Solutions (self-employed)
Developed web and automation solutions, including custom software for a Zurich-based construction business.

Student Researcher (Bachelor Thesis) - Disney Research
Developed a PyTorch framework for gradient-based SIM(3) pose optimization using frozen RenderFormer weights, designed to support future triangle-to-image transformers without fine-tuning. Compared differentiable rendering with DRTK and scene posing with SAM 3D Objects. Thesis grade: 5.5/6.

Expertise

Software Development

- Designed and developed a custom automation solution for a client.
- 8+ years of programming through personal projects.
- Highly proficient in JavaScript, TypeScript, Python and C.
- C++ experience through university coursework.

Computer Graphics

- Multiple projects using WebGL2 since 2020.
- WebGPU implementation of FlexLight.
- Architecture planner using WebGPU.
- Currently learning CUDA.

Machine Learning

- Multiple personal and university projects, including my bachelor thesis, using NumPy, pandas and PyTorch.
- Implemented GPU-accelerated MLPs using WebGL and WebGPU.

Linux

- Linux as my primary operating system for 8+ years.
- Experience with Docker.
- Managed multiple Linux VPS instances and websites.

Portfolio

FlexLight Engine ([GitHub](#) | [Demo](#))

Designed, implemented and manually optimized a path tracer from scratch, with ray-geometry intersection, BSDFs, BVH acceleration and importance sampling, combining original implementations with techniques from rendering literature. Implemented physically based materials and dynamic scenes. Migrated from JavaScript/WebGL2 to TypeScript/WebGPU in 2024. The engine implements NVIDIA's state-of-the-art ReSTIR PT Enhanced algorithm ([Lin et al., 2026](#)).

Languages

German Native
English C2
French B1 (DELF)

Skills

- Integrate into teams and adapt to their workflows.
- Work independently and prioritize goals.
- Communicate with clients to clarify needs and expectations.
- Communicate and coordinate independently with stakeholders.

Engagement

- **Head of Sponsoring for VIScon 2026**
- Member of Bündnis 90/Die Grünen and Grüne Jugend.
